Article published on March 12th 2012 | Health

Plastic surgery is a medical branch that has been observed for over 2700 years. The reconstruction of the human body's form and function is the key concern of this field. The earliest documented procedures were done in India by 800 BC which, a few hundred years after, played a role in the rise of the plastic and cataract surgery. Today, plastic surgery has advanced into one of the biggest medical specialties addressing numerous body problems, stopping potential disorders, and enhancing physical appearance.

The two branches of plastic surgery are reconstructive and cosmetic. Reconstructive surgery is distinguished from cosmetic plastic surgery by its focus on the repair of functional impairment, enhancing appearance and preventing possible difficulties from occurring. Cosmetic plastic surgery, however, is more physical enhancement. It is also used to maintain a physical appearance or to restore it when altered by climatic elements.

Reconstructive plastic surgery normally deals with congenital problems and burns, along traumatic injuries like facial bone breaks. The most prevalent procedures classified as reconstructive consist of breast reduction, scar repair, and tumor removal. Plastic surgeons in huge states like Arizona carry out different procedures in transferring tissue from one part of the body to another. In some cases, tissues from another source are used, a process called allografting. Tissues taken from another species, however, are called xenografts.

Cosmetic plastic surgery is practiced in a greater scale in other parts of the world. In the US alone, around a million procedures are added to the overall number of procedures conducted annually. The five most common cosmetic surgeries are liposuction, breast augmentation, nasal surgery, eyelid surgery, and abdominoplasty. These operations are conducted in lots of countries, like the United Kingdom, France, and Germany. Cosmetic plastic surgery Arizona surgeons perform comprises more than half of the total plastic surgeries completed in offices and clinics.

Liposuction and breast augmentation are the most prominent cosmetic plastic surgeries. They utilize reverse processes in that breast augmentation warrants any safe procedure to improve the size, form, and feel of the bosom, while liposuction decreases the size and form of a certain area of the body by sucking up the fat. An Arizona plastic surgeon also includes liposuction in other procedures like abdominoplasty.

Undergoing any procedure obligates a patient to undergo three steps: pre-operative, actual operation, and post-operative. In plastic surgeon Arizona features doctors who obediently orients patients with the benefits and dangers of the procedure and offers instruction to hasten recovery during the post-operative stage.
