Regaining Access to Exchange EDB files after Corruption by AlanWilson

Article published on July 3rd 2012 | Data Recovery

Sometimes Exchange Server faces the situation of data corruption and when it happens there comes a full stop to all the email related operations. Emails are the most followed medium to exchange the data / information and when the emails gets unusable due to Exchange Server downtime or corrupted exchange database it purely indicates the ruin of the business. Due to which important works are at stake and hampers important projects. The data are stored in mailboxes on the Exchange server. One way to recover the exchange database files is to extract database contents from the mailboxes in the form of ebb files and save them in the PST format. A richly featured EDB to PST tool is a survival solution which can recover the EDB files flawlessly.

When Exchange Server experiences disturbances due to various reasons like the failure of the hard disk, virus infections, Sever failure, .End log gets deleted, logical corruption to the server etc. It results in the loss of valuable data. But it is now possible to recover the damaged EDB files from the hard disk. For this convert EDB file to PST file for which require a well designed EDB to PST convert tool. The software performs recovery process very efficiently and restores all the mailboxes with its elements. Before going for the final purchase of this recovery software have a survey on the top selling brands and their features. The freeware demo version proves helpful if you confront such situation.

Freeware demo version available.

EDB to PST conversion is carried out in a few simple steps as follows:-

â€¢ Download the EDB to PST tool and then install in your computer

â€¢ Select the corrupt EDB files.

â€¢ Select the recovery mode i.e. Normal or Advance Mode.

â€¢ Selected EDB files are scanned. After the thorough scanning process, the recovered mailbox can be previewed in the left panel which helps to verify the recovered items.

â€¢ Then a particular mailbox is selected which is to be converted into PST file and then that mailbox is saved in a desired location.

â€¢ Thus the EDB file is converted to PST file, but the software used in this conversion must support the exchange database used.
