Article published on January 24th 2012 | Technology

A tablet device is a userâ€™s delight. Whether its surfing, sharing, songs, movies, reading, playing games or using the ever increasing number of apps, it provides all. Who doesnâ€™t dream of doing all these things using just one hand held device. And this is the reason why you have so many options of tablets to choose from.

Amongst all the available options, the Apple iPad is the most famous tablet device preferred by millions worldwide. Its popularity can be measured by the fact that apple sold 300,000 units of Apple iPad on the first day of its launch in US.

Letâ€™s have a quick look to see what makes it such a sought after gadget? Top of the chart would be its looks. You have to admit that when it comes to product design, Apple never fails to impress. The latest Apple iPad2 has a sleek, lightweight design makes it a perfect device to carry and slide into your bags or even folders. The screen is a 9.7 inch multi touch high resolution display which is capable of showing multiple languages and characters simultaneously. It comes with both front and back cameras. The back camera supports HD video recording along with images. The front camera can be used for making video calls as well as taking images and recording videos. Talking about the technical terms, it has a dual core processor which means better performance for the device. You have multiple connectivity options of Bluetooth, Wi-Fi and 3G (Selected Models) to keep you in touch with the world, no matter where you are.

Apple iPad comes with built in apps for surfing, emailing and playing games just to name a few. Moreover, there are more than 500,000 apps (free as well as paid) at Apple app store to download and use within seconds. It has motion and light sensors which gives a new experience while playing games on the device. You can also connect your I Pad to your HDTV or Projector and stream your display. Another prominent feature with the lastest iOS 5 is iCloud, which stores all your data remotely and synchronizes it with all your Apple devices via iTunes. This means the image you took with your I Pad automatically appears in your I Pod, I Phone and Mac computer.

Although these features are quite fascinating, the Apple iPad2 has few drawbacks as well. It is priced very high as the range starts from $499 for 16 GB model. And to get a 3G enabled one, u need to pay a minimum of $629 compared to its competitors. This certainly is not a very pocket friendly deal. The maximum memory offered is 64 GB which may be less when it comes to storing all your multimedia data, e books, games and music. And although Apple not providing Flash support is nothing new, they seem to care very little about it.

Apple iPad2 has its charms as well as shortcomings. If you like to flash what you got, this is certainly going to please you. But if you are a techno savvy person who prefers android and budget over looks, you may find a lot of options in the market.
