Security Features Found in a BMW by [Paige Tyler](#)

Article published on May 4th 2012 | [Auto](#)

Are you buying a car? If yes, then you're quite possibly searching for a car style that looks really good or something with a powerful engine. While searching for a car with looks or power is understandable, you really should not count out security attributes when browsing for vehicles in dealers. Some individuals don't want to consider accidents on the road, but they're bound to happen someday, also to the most careful motorists.

A car with a good security system is way much better than a rapid car without one; without protection attributes, you could end up going from 0 to 6 feet under in a matter of seconds. There are lots of excellent car brands to pick, but you might need to stop looking after stumbling upon a BMW car. BMWs are recognized for their performance, but their protection features are a couple of the very best you can discover in car dealerships.

Anti-lock Brake System (ABS)

The ABS protection characteristic system is created to gradually reduce the car's wheel if the driver brakes too quickly. By doing so, the tires do not skid out of control, giving the motorist a possibility to very carefully steer the car away from harm's way.

Automatic Differential Brake (ADB-X)

This is one of the finest safety characteristics you can discover when you purchase a car from a reliable BMW dealer. The ADB-X gives you dynamic performance, particularly when you're on tough road tracks. This protection attribute supplies improved traction on difficult areas such as snow, sand and dirt.

Automatic Stability Control and Traction (ASC + T)

This is among the elements of the BMW's Dynamic Stability Control System wherein you can speed up securely when on you're on a slippery and wet road. It likewise protects against the loss of traction when speeding on curved roads, achieving the specific 'drift' as directed by the motorist. BMW Illinois providers sell cars with this security characteristic.

Brake Force Display (BFD)

BMW Indiana providers likewise offer automobiles with a functional three-door brake force display. The BFD is a dual-stage brake light system that utilizes the most recent LED technology to help you react faster to incoming hazards. This is an essential security attribute as it additionally helps other motorists lest you make sudden stops and emergency brakes by intensifying your brake lights.

Electronic Damper Control (EDC)

Whether it's purchasing a brand name brand-new car or a pre-owned one from a trusted BMW Lafayette dealer, it's necessary to have the most recent Electronic Damper Control characteristic, as it decreases variance in wheel loads, making the motorist feel comfortable while driving on the road. If you need to know more concerning these security features, you can check out [bmw.com](#).
