3D Laser Mapping: Meaning and Uses by [Nishaidhijames](#)

Article published on July 4th 2012 | [Business](#)

3D laser mapping is all about entrusting power in the hands of experienced professionals who then use the technology justifiably. There are several functions performed by the technology. Let us now take a look at some of them.

Thanks to innovative ideas like the 3D laser mapping, mankind today can figure out accurately and exactly every single update taking place on the surface of our planet. And the good news is, due to rapid technological advancements, these solutions can now be availed by a child even. Using a handheld device, a kid can access important information from anywhere, even if it is the car's backseat. Blessed with extra ordinary capabilities, the technology or strategy can provide real time descriptions. Up till now the whole thing has been restricted to 2D. However, a series of developments in recent years has ensured that people are now able to access 3D visions as well.

Engineers and technicians working in surveying sectors are known to have benefitted most from the technology of 3D laser mapping. It has helped them in finding directions in a much better and improved way. In fact, you would be surprised to know that these techniques would actually prove immensely helpful at times of economic crisis. While the technology may be known by a dozen different names, in each case, the goal remains similar- to collect and gather a large amount of data for accuracy and speed.

As discussed already, these techniques are particularly useful in fields like surveying, mining, construction and many more. Hence, the idea essentially remains to produce data quickly and effectively so that specialists can make much better progress with their work. Each and every industry accounts for its very own laser mapping teams who work to take care of the entire process.

The technology has undoubtedly broken fresh grounds in the world of data collection and navigation. Hence, it is all about understanding and realizing the requirements and demands of your company and put 3D laser mapping techniques to use accordingly.
