A Glimpse of Global Injection Moldings by [Randy James](#)

Article published on July 3rd 2012 | [Business](#)

Injection molder and mold makers are interdependent on each other, they need each other for their development and flourish but yet they are different from each other. A mutually beneficial relationship exists between them which make them more and more famous. There are many types of micromold companies available in the market. Each of these micro mold companies has different types of plastic molding variations. A few types of plastic molding are:

1. Injection molding
2. Transfer molding
3. Compression molding
4. Blow molding
5. Stack molding
6. Metal injection molding
7. Insert molding
8. Micro molding and many others.

Each of these molding types has a separate entity, like for injection molding we have the injection molding companies. Injection molding companies specialize in micromolding. There are many facets to this form of molding as it requires skilled knowledge and expertise to perform the molding function accurately and smoothly. Each machine performing this task has a limit of CNC machine production. Hence manual skills are often used to meet the demands in production. Injection molding is generally used for making molds with metals and plastic. Every smallest of product to large machine parts all require this form of micro molding to ensure that the desired result is achieved.

Today molding has become one of the most booming industries, people are trained for this job, and highly qualified performing machines are used to make the various types of mold that makes important things clicking. If you search the internet you will find a lot of companies located all over the world that specializes in micromolding. There are many websites that will inform you about the production method as well as
