Want to click your best moments but missed them just because of charge less batteries in your camera or you cannot find spare batteries. Forgot taking off those alkaline batteries from your camera for long time and found them leaking and making your equipment non functional. The solution is now simple switch on to rechargeable camera batteries which do not leak and you can now click pictures any moment.

These batteries simply need to be recharged and you are even saved from carrying those spare batteries with you every time. These Ni-MH or Lithium-ion batteries are convenient to charge and do not require to be drained out before charging. You can change these batteries depending on your usage and can accordingly charge them. Ways to Prolong Battery Life:

Camera users can now save their money by using rechargeable batteries which can be put to use over and over again by simply charging them. But in order to keep the equipment functional the battery life of the camera should be taken care of:

- Don't switch your camera on or off after every shot as when a camera is switched on it consumes lot of battery power for starting its operations.

- If you're using a digital camera then try and use the optical viewfinder instead of the LCD as it consumes more battery power.

- While clicking your pictures during the daytime or in light switch off the flash in order to save the batteries from draining.

- Use an AC adapter for transferring your photos from digital camera to your PC as these adapters are safe and increase your battery life.

- Do not press the shutter button half way down unnecessarily as while the camera is functioning it would consume the battery power.

- .

Batteries play the most important role in functioning of a camera. They power the camera and assist you in clicking pictures so that you can cherish those moments forever. Save your battery power and enjoy clicking every shot.
