Comparison between Granite and Silestone by [Julia Roger](#)

Article published on June 7th 2012 | [Business](#)

Kitchen is that place of the home which is the most favorite to woman where she wants everything to follow her choice. Start from design to décor of the kitchen and from the cabinets to the countertops; everything needs to go by her choice. In many cases it is seen that women are confused on selecting the countertop between granite and Silestone the reason being the fact that both of them are good. They have their respective unique feature that can make them desired choice. Now, I will try and do comparative studies of granite and silestone which will make you decide easily. Price: The first thing which comes in mind while designing your home is the cost. The price of the thing you purchase is always a concern. The price of granite is lesser than the silestone. This is because of the availability. It is a bit cheaper compared to silestone.

Maintenance: If you consider maintenance and cleaning then silestone Worktops are easier to maintain. As the surface of the granite countertops is sealed it requires resealing after some years of use.

Health: Silestone is a non porous material which means it is safe from bacteria and all other element that can cause health problem. On the other hand granite pores needs to be sealed but when you purchase sealed granite it becomes as good as silestone.

Colors: The number of colors available in granite is far more than its competitor. You will find granite in all 120 shades that are commonly used. At the same time you will find numerous patterns. Though silestone is also available in different patterns and colors but it is less than granite.

Durability: Both are heat resistant and durable in nature. Scratch resistance is also good in both material.

Choosing the worktop depends on your preference and choice. Keep the details in mind while making the decision.
