Gaining Knowledge about the Various Flagpole Parts by [Julia Roger](#)

Article published on January 5th 2012 | [Business](#)

The ones used in the military marching or on the top of houses are called staffs. With the help of mast, the flags are hoisted in ships or boats. For the daily use of hoisting flags, commercial flagpoles are most commonly used. It will be great to have some idea about the various flagpole parts.

The peak of any flagpole is called the truck. It is the point where the pulleys are attached to pull up or down the flag as required with the help of the rope that hangs below. The finial is found lying at the top of the truck. This flagpole parts is nothing more than an attractive element. It is a complex object compared to the eagles, kites or other such decorative elements placed at the top of many flags. The halyard is nothing but the rope that joins the top and the bottom of the pole and is required to hoist or pull down the flag. They are found in various lengths ranging from something between 20 feet and 80 feet. The reason of using the snaps is to connect the flag to the halyards. These clips are generally made of plastic and swivel. The decoration of the base of the flag is given the name flash collar. The various colors that they are found in are white, bronze aluminum or black.

This is what that is required to know about the various flagpole parts. Knowing all allows one to create his own flag by buying all the necessary parts. Obviously, with the help of the internet, one has got the provisions of buying them online.
