Getting the most from your car by [Daniel Crow](#)

Article published on December 15th 2011 | [Business](#)

Modifications are a scary thing when you are applying them to a new vehicle, however when you are in the hands of a professional, you can be sure of a great job. The best option is often to get a performance upgrade rather than a whole new engine rebuild.

We may not all know a lot about cars, but engine remaps are something that will have been spoken about in passing at least once in our lifetimes. This usually results in either an increase in miles per gallon, or a performance increase, depending on your required preference. However, you may also be able to get a mix of the two, depending on the type of work that is being done and by whom it is done.

The advantages of getting engine remaps for performance purposes are that you will have an increase in driving quality, so your journeys will take place with less fuss and difficulty than with a car with standard tuning specification. Additionally, you will be able to accelerate more efficiently and therefore travel in a manner that results in an overall more comfortable driving experience.

The advantages of getting an engine looked at for economy tuning purposes is that you will be able to get a greater level of fuel economy for your money, resulting in great deals of money being saved by you each year.

In fact, a change in miles per gallon of just 2 or 3 will result in petrol cost savings of hundreds of pounds for the average driver over the course of a year. If you calculate this over the course of owning a car for maybe 6 or 7 years, then thousands of pounds could be saved for the sake of a simple engine check-up in order to provide economy tuning.

The difference that this will make will not be apparent at first and you will struggle to notice a difference in day to day life. However, when it comes to calculating your petrol costs at the end of the year or even the end of the month, you will find that you have made huge savings that cannot be made by any other method.

In this modern age where the economy is in a precarious state and there is not a great deal of money to be thrown away on petrol, in addition to the price of petrol being at an all time high, it is always best to find all possible ways that one can save money and not be wasteful.

If your car has a high engine capacity, you may also have troubles with petrol costs currently, as the larger the engine size, the more fuel you will get through each month and year. However, with tuning, your fuel economy will be increased to a degree that you will think that you have got a less fuel hungry engine size overnight.
