Greentech Recycling offers unique services to corporate and industrial sector by [Jullia](#)

Article published on December 8th 2011 | [Business](#)

Everyday thousands of pages are printed via printers for official and business purposes. A printer is an efficient machine that sends the printing command to a laser toner cartridge, which converts the signals to produce the desired printing product. A few years ago it was a normal routine for organizations to dump the empty toner cartridges into the bin. Those cartridges were taken to the local waste centers to be dumped into the landfill.

As these empty toner cartridges were made of plastic, they released several harmful gases under the surface of the earth after undergoing the process of decaying. These bio-chemical processes caused serious damage to the natural resources stored inside the heart of this planet. Several research studies were conducted and it was revealed that more than eight cartridges per second are dumped directly into the landfill, which gave rise to an increase level of carbon dioxide and sulphur dioxide in the atmosphere.

To control the alarming levels of pollution in the atmosphere and under the surface of the earth, the idea of ink cartridge recycling should be promoted at all levels. A recyclable toner cartridge is easy to use and it can save you the time to go and buy a new one every few weeks. These cartridges can be installed into the printer with ease and upon running out of their ink; they can be refilled to increase their life time. A normal recycle toner cartridge can be used up to six times to help the user save their valuable time and money.

After the recycle toner cartridges have reached their life time, they can be returned directly to the manufacturers. If you are someone, who does not have the time to visit the manufacturer, you could also sell these empty toner cartridges to the collection companies, who will pay you handsome amount. However, you will need to have cartridges worth more than twenty pounds to be able to acquire their service. As a customer, you could arrange the collection by using their online system, an email or a phone. Exchanging your empty toner cartridges for cash is a cost effective and efficient way to save extra pennys.

GreenTech Recycling has made its name in the market of "recycling ink cartridges" with some high quality customer services. If you are based in UK, you can arrange to recycle your empty toner cartridges with just a phone call. Paying upto 12 pounds for empty inkjet and toner cartridges, the company is offering very competitive rates. On recycling a minimum of twenty pounds worth of empty toner cartridges, they provide their clients with a free courier service. If you have any queries regarding order placing, collection procedures and delivery services, you could speak to the member of their experienced and trained team of professionals or visit their website online.
