Hidden Spy Video Cameras â€” View What Happens in Your Home when You are Not There! by [Daniel P. Mueller](#)

Article published on March 3rd 2012 | [Business](#)

In our technology craze society, whether old or young, we enjoy new technology as well as the convenience it provides. An internet spy camera is the latest kind of security measure that enables a user to see that is happening real time. You can easily monitor your pets or kids while you are work or at the office. Simply find a computer with reliable internet connection and log in to view the video footage spot on.

As an aggressive business owner you should be interested in your business or home security. For starters, you should secure your home to enjoy a comfy nightâ€™s sleep and peace of mind as this ensure your family is secure from falling prey into the hands of burglars. You should keep in mind that security is important as is advertising or marketing. What is the point of making high sales when criminals decides to rob you at gun point or your employees decide to rip your off. Although insurance will come in handy in the event something dreadful happens, it is far better to prevent such an accident from happening.

Okay, here is what we have discussed. Already we agree that technology advancements are here to stay and you know a few things about home and business security. But are you fortunate enough to own or use a spy video camera? This is a miniature camera often hidden in an object to send color videos directly to your laptop. Once you connect your spy camera with your computer you can watch the recorded video online from any location provided there is reliable internet connection.

Though the camera is easy to operate there are a few basic steps you need to follow to ensure you get the specific needs. Once you buy the camera install the software directly in your laptop or computer. Using the software put some basic information on the computer, including your name and password as well as IP address. Use the USB cable to plug your camera into the computer and verify that you can see the exact images being shown on the camera â€” simple, right! As the camera is capturing video so is your computer recording.

To ensure you fully understand the power of spy video cameras just visit your local public library where you have can enjoy free internet. If you have a data enabled phone then you are good to go. After you successfully login into the computer using your username and password, it is possible to see everything recorded on the camera. Additionally, you can take still images or snapshots and playback what the camera recorder while you were away. Simply put, if you own a spy video camera the set up is simple and you can view what is happening real time regardless of your physical location.
