How to Apply Powder with Embossing Heat Gun by [Mary Porter](#)

Article published on June 25th 2012 | [Business](#)

Embossing heat gun is a crafting tool designed for applying coloured powder and glitter to arts and craft to create raised images or lettering. Embossing heat gun is the perfect finishing tool to help create the final polished and professional look to your craft. The power from embossing heat gun can vary but they usually provide 300 watts of heat. Embossing heat gun enables the finishing touches such as gloss finishes in a variety of colours and types. Embossing heat gun can be used on powders such as embossing glitter metallic, pastels, opaque, fluorescent, sparkle and clear.

To create the finished look the embossing heat gun should be used as follows: Create a wet ink outline of an image with a rubber stamp or embossing pen. The ink must still be sticky whilst applying the powder therefore speed is important. Once the outline is drawn, sprinkle the embossing powder over the specific sticky and wet areas that need to be embossed. After removing excess powder the embossed powder should be heated with an embossing heat gun. The embossing heat gun should be applied carefully so the embossing heat gun covers all areas including underneath ensuring the ink is thoroughly dry.

The embossing heat gun should be used carefully and moved around constantly. Embossing heat gun can burn through the paper or overheat if the embossing heat gun stays in the same place for too long. The heat from the embossing heat gun will melt the powder leaving the dry outline in a raised finish. Ensure to leave the powder after using the embossing heat gun as it will solidify after a few seconds. Whether you're a beginner or experienced user of embossing heat gun you can buy an everyday kit or starter kit containing multiple pots of embossing powder with different finishes such as embossing glitter hologram gloss or regular. Having the variety of finishes and colours allows you to experiment more creatively with your embossing heat gun and embossing glitter.
