How to Buy Gold to Make Profit by [Ashish Pandey](#)

Article published on April 3rd 2012 | [Business](#)

The economy of a country varies from day to day depending on various factors. The inflation which rocked every economy some time back resulted in the stocks losing their value and bonds being reduced to mere papers. In all these cases only gold was able to retain their value as such or at a minimum level. Those who invested their money in gold market were able to reap the profits when the inflation receded later. The inflation depicted the security of investing money in gold. Later many people started investing their savings or wealth in gold. A majority of people who still wish to invest their money in gold do not know how to buy gold or from where to buy them. To help such beginners with their investment there are many investors in the market today.

The person must be careful to see that they buy gold from only reputed or well known investors or they may end up throwing their money into a drain. There are many questions they must ask to themselves and to the investor before deciding on the investor in the market. They must first do a study on the investor and try to know for how long the company has been in business. They must take a list of the customers and inquire with them about the services offered by the investor and if they are satisfied with the services. A good investor will always provide free advice regarding the troubles faced by the customer during the trade. The customer must also inquire about the extent to which they have control over their account. The investor must also have an A+ rating from the concerned authorities.

Once the queries are answered the customer can go ahead and buy gold for investment. Once the person has opened an account with a certified investor they will have a certified gold specialist who will help them through the process and answer all their questions. Each person has a different need, for the same reason the gold products must be chosen such that they match the person needs. The specialists will assist the customer to choose the right type of gold product for their need. The next step will be to decide on whether the person needs to hold the purchased gold in their hands or have the company store them with any other services.

If the gold is being stored with any other services then they will have to be provided with a fee for the storage. The best option will be to keep the gold with the customer himself. Most investors provide reduced rates for first time investors who are opening accounts with them for the first time. The accepted modes of payment for most investors are personal, company or cashier's cheque and bank transfer. The buyer will be contacted through each step of the transaction until the product is delivered into their hands. Security measures are taken like signature verification and insurance to ensure that the gold is delivered to the right person.
