Some useful combi boiler facts by [Robertham](#)

Article published on April 26th 2012 | [Business](#)

Combi boilers are the most preferred option when setting up hot water supplies and central heating system for personal and commercial purposes. These boilers are extremely dense and can normally be fixed on the walls of your home. These types of boilers work best in small houses but you can also use them in big houses depending on your requirement. With these boilers, you will have unrestricted water supply which means an individual will not ever run out of hot water. An individual will have hot water provided water is available in your main.

If you are planning to install a combi boiler in your home, there are certain useful facts about these boilers that you should comprehend before you make the final decision. The very first fact is that they are extremely easy to install. With these boilers, you would not need to fix hot water cylinders, tanks, and pumps. You just need to set up compact boiler unit in your home. Usually, it takes a professional more than 2 days to transform from a traditional boiler to a combi but if you are installing this type of boiler, it would take only a single day to install.

Combi boilers are considered as the best choice for many house owners. Recent research has shown that 50% of the homeowners have installed combination boilers in their homes. They are extremely efficient and reliable. When these types of boilers first introduced in the United Kingdom, they were not so reliable. This was simply because of the intricacy of the combination plus the misconception that the installers do not have proper knowledge and training regarding how to install them.

Nonetheless, more and more professionals are now extremely knowledgeable and skilled in the technology of the combi boilers and are capable to install a new boiler. These types of boilers are more efficient than the traditional boilers. These combination boilers are a great space saver. You can install them in number of places. They are very compact and do not consume a lot of space. The versatility and size of these boilers enable it to be fixed in various places such as bathroom, kitchen, loft, garage etc.

Another important fact about combination boiler is that if this system fails, there would be no supply of hot water. The traditional boilers were divided into three main parts – the hot water cylinder, the boiler and the tanks. Therefore, if it was to fail, you will still get hot water. However, a combination boiler is one big unit and does not have all these parts so if it, in any case fails, you will not have hot water supply. Hot water and central heating system with one equipment- is quite alluring enough to make you purchase combi boilers. But additional savings is yet another benefit if you choose www.combiboiler.co.uk!
