Article published on August 13th 2012 | Business

Many people are buying American energy efficiency products since they have the highest quality with benchmarks like UL, LM 79, and LM 80. The Led lights made in the usa are of high quality and they can do the job since they can direct better the light. There are products of less quality and are only able to produce 60 lumens per watt or extremely low CRI and even fast lumen depreciation in a short period. Using the products of low quality will expose the organization and the installers on different safety risks. This is because low quality lights are likely to suffer the overheating as wells as the circuit failure. The Led lights made in the USA are of extremely high quality so they can meet utility rebates. The T8 lights and the LED flat panels are used to replace directly the fluorescent lights and HID bulbs.

In case you would like to have the directional light for the highlighting purposes, the LED is always the best choice. Don't be mistaken by buying the products of low quality which may seem to be the best idea, in the end it may be proven to be the wrong choice. This is because the bulbs will begin to fail as soon as you install them and you will lose most of your time trying to contact the retailer or manufacturers outside the US without any response. Shipping back the products can be proven to be a costly option and sometime the warranties are not applicable where you may be living.

When you buy LED made in USA, the prices will be the same as the one you buy from elsewhere. However, the best party is that if you live in USA, you will qualify for the rebates. When it comes to the LED tubes, you have to know about its advantages before you choose them. The tubes can be used in schools, restaurants, shopping malls and office buildings. The LED gives less heat contrary to the traditional lighting. The LED lamps do not generate the noise because they use the sophisticated electronics. The LED protects the eyes since they do not have flicker or light failure while they offer the quick start and the conversion of the AC into DC. LED tubes do not produce the radiation, infrared light and ultraviolet lights. They do not attract the mosquito's and the other bugs since it does not give off much heat. The traditional lamps of fluorescent use high voltage for lighting up, however voltage for LEDS is lower. LED technology can be used in many products like the LED strip light, LED grow light, LED tube light, LED wall washers, LED downlight, LED panel light, LED bulbs and LED spotlight. They are used in the architecture, stage and industry lighting in both the outdoor and indoors applications.
