Utilities of V-Ray Rendering by [Julia Roger](#)

Article published on August 23rd 2012 | [Business](#)

vray rendering is a rendering engine. It is an extension of 3d animation software. It is an advanced form of rendering process. Rendering farm is a technology widely used in 3d animation graphics. It is the process of rendering the frames of the movies to bring more vivid and lively effects. This is one of the most advanced types of graphic software. This technology has brought a rapid revolution in the world of animated graphics.

Application of V-ray rendering

This is widely applied for 3d movies and is used by big and small studios. Various freelance artists and technicians also use this process for making movies. This is one of the most advanced as well as useful kind of software for 3d effects. The price of installations of render farms for vray render process is not always very high and is affordable by many medium sized as well as small movie production firms.

V-ray rendering technology

This technology is done with the help of super computer clusters called render farms. These are high memory processors delivering excellent performance. These processors render the movie frames in a very systematic way, thus enhancing the visual effects of the movies. The processors are usually Intel Pentium. The processors of workstation are similar to the processors of the render farm. This technology is applied by skilled technicians and artists of the animated movie world. This technology is presently applied in almost all nations of the world. Students learning animation graphics are taught this software as a part of their course.

Popularity of V-ray rendered movies

This software technology finds its applications widely in 3d animation graphics in animated movies. It gives vivid 3d geometrical view of every object in the movies. These objects may be buildings, human beings, landscapes, bridges, etc. The bright color and texture of the objects gives realistic feeling to the movie viewers. 3D graphical movies are becoming more and more popular day by day all over the world. The children are happy to watch their favorite cartoon characters in three dimensions.
