Elements of a Physical Security System by [Fernando Severns](#)

Article published on April 17th 2012 | [Computer](#)

Security is a major concern if your property is located at a crime- and violence-prone area. Installing an inclusive physical security system will prevent intrusion, burglary, and other forms of crime that might endanger your family. It is important to understand the elements and design that makes a physical security system effective.

A physical security system is designed to prevent, control, detect, and identify potential intrusion and crime. Different elements, including security alarms, lock system, and video surveillance, perform the system's functions. For optimum security, a human sentinel is added to provide immediate response when intrusion is detected. The level of security may indicate the value of the property being protected, which sometimes leads to even more aggressive attempt of intrusion.

## Prevention

The initial purpose of physical security is not to snare attackers or intruders but to scare them away. Warning signs, restricted access points, site lighting, and trenches are the best example of tools used in this layer of physical security. When an attacker or intruder sees that the value of

## Access Control

In case the intruder succeeds to trespass, the physical security system consists of tools that control access to specific areas inside the property. A common example is the lock system for gates and doors, which delays, if not completely prevents, access into a room or facility. Today's entry points are designed with electronic lock systems to increase security and to reduce the need for extreme monitoring.

## Detection

To monitor any suspicious movement inside a restricted area, property owners install security alarm systems. Security companies New York, Long Island, and other prominent places trust recommend these tools to alert the property owner and, if possible, the neighbors about the ongoing illegal activity. A security alarm system or burglar alarm system consists of an array of sensors, a control panel, and a set of interconnections. Each sensor is placed in areas prone to intrusion, such as back doors and windows.

## Identification

Some intruders do not mind alarms and carry out their plans. Security companies Long Island has install surveillance cameras at strategic places within the property to record the events taking place and use the tape to prove the crime and charge the perpetrator. Video surveillance produces the most reliable evidence to help a property owner recover damages. To understand physical security further, About.com is a good place to continue visit. This website provides more detailed description of physical security offered by security companies New York residents recommend, including its components.
