How does exactly cloud computing work? by [John W. White](#)

Article published on July 27th 2012 | [Computer](#)

Businesses can have thousands of files and several programs that all need to be stored for daily operations. These can take up terabytes of space on internal servers which cost money to install, maintain, and operate. Cloud storage solutions give businesses a way to store their information with server companies that already have the hardware. A cloud provider is a company that stores information on servers that are connected to the Internet and can be accessed by the clients whenever they need their work.

GNAX uses a colocation data center to store all files and secure backups. Colocation backups provide more security because files are stored in two different locations. One of the server facilities is located in Atlanta and Dallas. This means that if one site suffers from a power failure or a drive malfunctions, data is still available since it is stored at the other location as well. The data backup solution offers businesses a secure and safe way to store and access all of their information. Backups can be handled automatically and scheduled so that they do not interfere with daily activities.

Data center providers are what make cloud computing possible. Cloud storage solutions from companies like GNAX store programs and files on secure servers and commit resources and access to the company. These services are provided with a monthly rate and make it so that people can access their files from anywhere that they have an Internet connection. Workers can bring their data home by simply logging in and accessing their work files. GNAX also uses automated resource management to ensure fast connections. More information is available at gnax.net.

With over 10 years as an industry leader in the southeast, Global Net Access (GNAX) operates two world-class data centers, AtlantaNAP and DallasNAP, offering mission-critical data center colocation and cloud services. GNAX provides superior technology solutions to a variety of organizations and industries worldwide.

Privately held with headquarters in Atlanta, GA, GNAX was founded in 1999 and has retained net income profitability since 2003. We are diligent in our financial management to ensure optimal operational support and disciplined growth.

Our plan is to grow continuously by providing industry-leading colocation, cloud services and applications with superior technical support and customer service in a secure, highly available, mission-critical data center environment.

100% customer satisfaction is our goal, which we achieve by providing 100% focus on the customer and providing customized solutions that will meet immediate, as well as future needs.
