Should Businesses Trust McAfee Security-as-a-Service Platform by [Neha](#)

International Data Corporation (IDC), a leading market research and analysis firm focusing information technology, telecommunications and consumer technology has revealed that worldwide spending on cloud services will shoot up threefold, reaching $44.2 billion by 2013. Another recent report from Gartner predicts that the volume of enterprise data will touch a remarkable height of 650% by the next five years.

Evaluating these situations McAfee, the world's largest security technology developer continues to extend its security leadership to the Cloud with new enhancements to its security platform for the Cloud. The trusted McAfee Cloud Security Stage provides a framework allowing customers to extend their security and policy enforcement into the Cloud by securing the three primary channels of traffic – email, web and identity. It was officially announced at the 10th Cloud Expo, June 11-14, held at New-York. The role of the McAfee cloud security is quite comprehensive, it not only protects data that resides or travels across the network and the Cloud, but also shields their organization, their remote offices and their mobile workers against emerging Internet threats. Hence, by transitioning appropriate business functions to the Cloud will help businesses to shield their network or office in an advanced manner. It fosters streamlined business processes, greater business agility, increased security and stronger access management.

Before zeroing to install McAfee software on any system or server, experts should give heed to the opinions given by several security testing institutes or labs like AV-Test, AV-Comparatives, etc. In a recently conducted test to compare software performance of cloud-based products in the categories of Protection, Repair and Usability the McAfee VirusScan Enterprise with EPO 8.8 bagged 5.0, 4.0 and 5.0 points respectively. The products analyzed were made to go through a common virus or malware sample, and the operating system was kept windows7 in all, and level play ground was offered in terms of product settings and Internet updates. However, before going for a paid version, it is better to learn about the product features and suability through the trial version, also take a sneak into the McAfee reviews available with noted tech support or antivirus support vendors.

In case of hassles or software problems, you can rely on the McAfee support services to diagnose and effectively out-root that. Experts can make use of suitable remote tool to scan the status of the various integrated components of Windows (event viewer, registry settings, action center/security center, etc.) and Mac (.plists and System Preferences) to conclude the background causes. After understanding the status experts can put into action the right troubleshooting methodology to fix prevailing errors. In the course of troubleshooting experts can uninstall McAfee, update and upgrade the software. And if required, they can augment existing security features as per your business portfolio. McAfee Cloud Security Services are available for your clean pipes initiatives or any of your cloud-based or hosted networks. Thus, realizing the dream concept of McAfee i.e. Security-as-a-Service for complete endpoint, email, web, and network protection through the cloud thereby slashing the costing of the IT department, and time, effort, & costs for faster and minute-to-minute updated protection. With effective, efficient, and fully managed protection you can focus more on your business.
