Watching 3D Television a Great Experience by [Julia Roger](#)

Article published on June 25th 2012 | [Computer](#)

Those days are gone when black and white television was in use; now the television industry has undergone a sea change. . If one is really looking at options to view the television in a better way the concept of 3d television can seriously be considered. This special television set has the capability to project a television program into a realistic three dimensional field. The techniques employed in the process are stereoscopic display, multi view display, or a 3D display. The history of this form of viewing can be traced back to as early as the 18th century.

It was in the year 1890 that a patent for 3D movie process was filed by British film Pioneer William Friese Green. Once the product was viewed stereoscopically it could be seen that two images are combined by the brain in order to produce the 3D perception. There have been many such instances of film producers wanting to make films in 3D. However, it was only in the year 1950, with the increasing popularity of television, the concept of 3D gained momentum. If one is really toying with the idea of viewing television using the 3D concept it is indeed a great idea. However, the television needs to be chosen carefully. The television sets need to be high end and must include Ethernet USB player and recorder and a blue tooth. It is a great experience watching television under the 3D concept. Recent developments have ensured that for some sets one does have to wear special glasses.

If one is eager to explore ways of viewing television in a better way, the concept of lcd television can also be given serious stuff for thought. It stands for liquid crystal display television and is thinner and lighter than cathode ray tube or other similar display sizes. Viewing television is a better experience once one has had it installed at the premises.
