Does Invisalign really get you the results that you want? by [Vickey Hill](#)

Article published on December 19th 2011 | [Customer Service](#)

Have you been thinking about straightening your teeth but don't know why people turn to Invisalign? Over 1.5 million worldwide have been treated with Invisalign and the number is rapidly growing.

What is the Invisalign procedure?

Before you get your Invisalign aligners, the doctor maps out what aligners you will need before you are supplied with a set of Invisalign aligners. Each aligner makes adjustments to your teeth and gradually shifts them. The Invisalign aligners adjust your teeth with the controlled force of the thermoplastic design. Each stage allows movement to certain teeth only.

What are the benefits?

Invisalign aligners are virtually invisible and let you have the flexibility to remove your aligners to eat and drink. You can also brush your teeth and floss normally without having to worry about using specialized floss and ruining your toothbrush and it is better for periodontal health. Not only that, you will be able to clearly see the positive results. There are no metal brackets or wires that can not only cause irritation to your cheeks and gums, but may even scar them. If you're thinking about getting Invisalign braces for your teen but worried that you'll spend an egregious amount because they may lose them, don't worry. When your teen starts treatment, your teen will be able to have 6 free replacement aligners.

Regular braces, on the other hand, can cause pain and discomfort, mouth sores or injuries caused by the wires, buildup of plaque, discoloration of the tooth, tooth breakage and even tooth decay from inadequate brushing.

How do you know Invisalign is right for you?

You can take a self assessment on the Invisalign website and see if it is right for you. Then you can find a dentist or orthodontist to start treatment. Even if you're currently wearing braces, you can still make the switch.

Overall oral health will be better with Invisalign than with braces. Because Invisalign has become very popular, you can get Invisalign discounts throughout the Los Angeles metropolitan area. Invisalign Calabasas dentists, in particular, are offering great discounts and provide excellent Invisalign braces for their patients. Many patients from all over the Los Angeles and Ventura counties go to Invisalign dentists in Calabasas to have high quality Invisalign braces other dental services. When people are unsure of which Calabasas Invisalign dentist they should go to, people often turn to a Calabasas family dentist or orthodontist.

Finding affordable general dental services and cosmetic dental services is difficult in Hollywood because they can charge you an arm and a leg. However, an Invisalign Calabasas dentist can offer a more affordable plan for you. So, try an Invisalign dentist in Calabasas.
