Think of Hotmail Issues That Have Gone redundant by Online Hotmail Support by [Jack K Wilson](#)

Article published on December 2nd 2011 | [Customer Service](#)

Today, Windows Hotmail has much to offer. Forget about just sending and receiving mails; today you can connect it with Facebook, sync it with Gmail, AOL, and Yahoo! Plus Mail, LinkedIn, and Outlook. It has also become 10 times faster. Thus, manage digital communication in a far better way from a single platform. Use the same username ID and password to work remotely with your Office Web Apps and share the work through the Windows SkyDrive, and even remotely access your home PC. Does it keep your eyes strayed?

Whenever expectancy rises, the responsibility comes into picture, and the Hotmail Support is working consistently to stay true to the commitment. Whether you have issues related to blocked account, hacked account, forgotten password or have signing in problems, setting up and configuring other e-mail accounts, or accessing files over the Internet, the support panel has a solution for each. Go to Hotmail resources, and find quick and easy solutions for a range of issues and topics. From the site download Windows Live Messenger app for smartphones and customize its settings as per guidelines to carry Hotmail on-the-go. Seek steps to use SkyDrive, upload files and change access permissions to those for security concern.

Hotmail Help Service is also available from independent service providers or Microsoft Certified Network Partner. Apart from ready-to-follow solutions here you can have live technical support from professionals, who can instruct you over the phone or can take care of your issues remotely. They can configure the settings related to the e-mail, IM, and Internet and can resolve issues pertaining to sharing of Office Web Files over the Internet. They can help in setting permissions for SkyDrive files and folders, customizing the Windows Firewall and updating security software and Windows Firewall, which make your network protected against any data breaching attempts.

To change the permissions for an existing folder

Go to "Windows Live SkyDrive". You might need to sign in with your Windows Live ID.

Navigate to a folder that you want to change permissions on.

Open the information pane by clicking the show information button.

Under Sharing, click "Edit permissions".

On the Edit permissions page, drag the slider to set the permission level that you prefer. To add permission to someone not in your Windows Live network, enter their email address in the "Add additional people" box. Click "Save".

However, you can't change permissions for individual photos, files, and subfolders. You are permitted to modify settings in top-level folder. You must respect copyright imposed by authors or organizations while sharing any content online. Copying or sharing unauthorized materials violates the Microsoft service agreement. Parents can restrict kids from sharing content. They can use Windows Live Family Safety, and decide contacts with whom to contact.

Hence, you can stay connected and productive with your Hotmail account from anywhere round-the-clock.
