Mobile elevating work platforms are common in work at heights environments. With the booming construction industry all across the globe, it is not surprising to have more employment in the work at heights industries. Hence, these workers must be firstly trained to handle the various machineries and equipment such as elevating platforms and forklifts at the work site. These are heavy and powerful items which can be useful and dangerous if carelessly used. Hence, it is essential for managers and supervisors to take careful note of the types of equipment to be handled at the work site to avoid injury and death.

IPAF courses for Managers

IPAF is a well known training leader that has developed many safety courses for work at height environment workers. Their courses are very popular around the world as industries approve their contents and approaches.

One of the more popular safety training courses is the MEWPs course for managers. This course is designed to enlighten and equip work at height managers in identifying and managing the heavy work equipment with inspection and proper maintenance to enable their safe usage by the workers.

Although all work sites would buy insurance to cover any possible accident at the workplace, prevention is better than cure. Hence, it would be cheaper and more productive to have employers, managers and supervisors be properly trained on the full work scope which includes safety and health issues than to be unaware of the dangers and risks of the job.

With the MEWPs courses, managers and supervisors are able to arrange the facilities and manpower properly to ensure safety and productivity; the two can go together at any work place.

Aims of training courses

Course candidates would be enlightened on the proper requirements for inspecting the vehicles, machinery, tools and equipment prior to their usage by workers. They are responsible in ensuring the safety of their workers using any work tools.

Candidates would also be informed of the latest safety regulations at work that is related to MEWP usage. The correct emergency procedures would be identified with the right measures and capacities as well as possible limitations to make sure that a safe operation is pursued at the workplace. Candidates would be armed with the right information to select the MEWP correctly as well as all fall protection equipment pertinent to their work.

Responsible managers and supervisors would do well with IPAF MEWPS courses which can also open more career opportunities for themselves.
