As I.T and other market like electronics etc are in a phase of uncertainty where one technology is replacing another at regular interval of time, it become very tough for professionals to update themselves continuously of different technologies for their endurance in the market.

Companies dealing in training programs on different technologies are in abundant vogue, because of the unstable nature of the market. These training companies have different curriculum separately for students as well as for professionals. Nowadays, students are going for training for getting entry level career opportunity whereas professionals are choosing training programs for their survival.

There are wide range of training programs offered by leading training companies and few of them are -

- 1) Short term trainings - There training programs are designed for the engineering and other technical students who are at their initial stage of technical education like first and second year of their technical graduation. During these short term training programs students get to know about the basic of the technology of their preference so that they can learn technology on more level later during their third year.
- 2) Summer trainings - This is the most important category of all training available for students and mandatory too. During these training programs students choose the technology in which they want to make their career. These training programs are knows as building block for firm technical bedrock.
- 3) Project training - These training programs are specially designed for forth year students because final year project play a very vital role in placements and their overall score. And to develop a really good project, students needs navigation of expert who can direct students in the right direction and explain them crucial aspect of project development. Because for scoring good score in project viva students must have great knowledge which can be only achieved by working on the project from it's initial to the final stage under supervision of seniors.
- 4) Vocational Training - Professionals mostly prefers these training programs as only advanced topics are discussed during these training programs and the schedule of these training are in weekends only.

In other words, we can say that vocational training programs are for professionals only. Because professionals never go for complete training programs they just want training on certain advanced topic which are introduced recently. And they don't have time for training during weekdays so they attend these training during weekends as most of the MNC's are off during weekends.

- 5) On Campus Training - These types of training programs are conducted in engineering colleges where students demand for training in their college campus only at affordable prices. As there is a large number of students who don't want to go out of their cities just for training. So special on campus training programs are conducted for them in their college only.

For making maximum out of the training programs, one must understand what kind of training he or she must go for. Because there is a particular training programs for different needs of students
