It is a challenging task to maximize literacy among all. Multiple educational resources are being employed to make a noticeable landmark in offering education for all. Initiatives should be taken to update the education for all system.

Education involves acquiring knowledge in every phase of life in diverse fields. It takes out the best out of one's potential and provides the learning opportunity to reinvent skills even at later stage of life. The government pledges to provide education to its citizens even in the remote and underdeveloped areas and aims to meet the educational needs of children, young and the old alike. Education for all is a global initiative taken up worldwide to expand and fulfil the comprehensive learning needs of all sections of the society.

With the help of computer technology, distance learning and e-learning programmes have been introduced to enable education for all. Numerous educational resources including course materials, full courses, modules, streaming videos, textbooks tests, software, and other tools, materials, or techniques are employed to facilitate access to knowledge. The teaching, learning, and research resources and materials can be reused. These, ER materials, lately are being integrated with distance

education and online learning courses. The educational experts structure and develop these educational resources and even make use of social media to enhance its content visibility.

The educational resources are also employed to

provide extensive learning opportunities to working professionals. The academic development, undoubtedly starts early in childhood and continues till the university level. However this skill development process should be continued to the later employment stage also. New training methodology

and innovative educational techniques should be put to use to enhance the quality of learning and to reconstruct the working professional education concept. Leadership training, communication and other

soft skill are indeed important in the corporate sector for the career advancement of the working

professionals.

It is important to keep pace with fast changing technology and to blend business insights with the technology breakthroughs. Working professional education is important to improve understanding of

one's arena of expertise and to imbibe leadership skills. Executive courses have been designed to expand specific abilities as well as process the basic skills needed in different professions to meet the demands of employers. Many offline part time and online courses ensure that the working professionals update their knowledge and professional skills.

One has to constantly reinvent skills in order to be relevant in today's dynamic and competitive business environment. Working Professional education programs for working professionals allow the universities to transfer research results and innovations directly into the workplace and fulfil the learning needs of the people. They extend research and education beyond the traditional years in the

campus to meet the career long learning needs of the working professional. They now stand a better chance of being considered for higher-level positions and the self-employed can expect to multiply their earnings by making commercial use of skills gained through professional education.
