Unable to send emails really a Major Server Problem by [Lee Rio](#)

Article published on March 14th 2012 | [Email Marketing](#)

Recently for the past few months you have been facing this unusual problem of being unable to send mails to desired addresses. The problem, which may seem trivial initially, turns out to be massive later. You may come across kan ikke sende mail while working over the internet. Mail sending errors show reports that vary in different ways. SMTP errors often hinder mail sending process, which results in massive issues especially when you have business to deal with.

Kan ikke sende mail- a possible solution for it

If you are working with email clients like Thunderbird and Outlook, you might come across email sending issues. Your firewall protection can be a possible treat to the TDC SMTP server you are working with. While installing the antivirus system you must first see to it that whether the installing standards are preventing your system to connect to the internet. Moreover, you have to look into whether such standards are executable for the latest version of your email client. Firewall protection often comes along with threat level. The fundamental issue arises when it comes to sending the mail.

Kan ikke sende mail is common when port 25 is blocked by an antivirus program; this is because it prevents emailing worms from functioning properly. If you recently configured Thunderbird's™ most recent version, you need to check out if your antivirus program is preventing it from working properly. A few back we found ISP companies installing mail filtering systems before the mails reach destined TDC SMTP server. These filters helped sieve the errors in emails in course of which faulty emails didn't™ reach emailing server.

Sometimes kan ikke sende mail crops up when your mail contains this specific word "geocities" in the attachment. You also have to ensure that your email client is in the online mode. Sending a mail when the client is in its offline mode would land your mail in the Unsent folder. You also need to verify your TDC SMTP service provider when you are unable to send emails. You need to find out if the settings of your ISP provider match with your Thunderbird set up. Problems with kan ikke sende mail may arise when the upgraded version of your email client has the "Check and Send" option disabled; also see to it that if an Anti spam tool doesn't™ disappear. Thunderbird refuses to send emails when such a problem arises.
