What You have to Know About Evolution vs Creationism by [Joy Shiela](#)

Article published on January 18th 2012 | [Environment](#)

There are simple facts of life that seeks a thorough explanation. Some people are fond of providing much needed explanation. They may be scientifically proven through scientific evidences, experiments and researches. History is mainly the reason for the changes that occurs around us. That is why scientists and researchers take time, effort and money to prove that human beings and certain creatures live on this world millions of years ago. The debate over Evolution vs Creationism is something that has been on-going for a while. It revolves around the topic on the creation and the evolution of man including other prehistoric creatures.

Even when these things are studied in grade school, highschool and college, there are some information that only limited people know about. The explanation on how man came to about and how he together with other animals came to be is lacking.

With the evolution of man and living beings become unaccepted by scientists and researchers, it cannot be helped that there are still those who believe of evolution. Some people still strive to produce an evidence and a link between man and apes including other pre historic creatures to the species that we all know now about.

Even with modernization, there are several people who believe of tales like giant feathered dinosaurs are today's modern flying birds. Still, there are others who adhere to the origin, ancient an historical life, etc.

There are lots of things that occur that are results of man's actions. It includes building modern buildings, bridges, houses and using harmful chemicals that causes air, land and water pollution. Consequently, it brought about global warming that causes extremes in weather conditions. The ozone layer is thinning by the hour which makes skin cancer rampant. Ice is melting away in Antarctica and other regions which causes death among Polar Bears.

There are still some people who tried to deny these things including the climate change denial. There are efforts coming from internet site owners to help provide ways in saving the planet. Products and services are geared towards the use of natural energy production. This include internet hosting services that utilize energy from the wind and sun among others. There are the alternatives of solar panels which can generate electricity from the sun's energy. It might be something as simple as choosing the natural goods over the artificial products.
