Quality, variety, and price of the Eureka Forbes AquaGuard by [Agamsingh](#)

Article published on February 16th 2012 | [Family](#)

Are you sure your water purifier is safe? If you are using the Eureka Forbes AquaGuard, you can take it for granted that you are using the best. Eureka Forbes follows the strictest of quality standards in its manufacturing facilities. The end products are then tested at reputed Indian and International Labs like Thames Water Institute - U.K., University of Pretoria, SA and more for quality and purification effectiveness. This is why Eureka Forbes AquaGuard is always safe. To know whether you need an AquaGuard RO or UV or any of the other mechanisms that is offered by Eureka Forbes, get your tap water tested. Eureka Forbes offers water testing facility at its water labs located in major cities. A very nominal charge is levied for the testing.

When we speak about the Eureka Forbes AquaGuard, there are numerous models to choose from under different categories. Under the blend mechanism category, you can choose from AquaGuard Total Sensa, AquaGuard Total Duo, and AquaGuard Total Protec Plus. Then you have AquaGuard Total INFINITI, AquaGuard Classic, AquaGuard Compact, AquaGuard Booster, AquaGuard Hi-Flo, and AquaGuard VERVE under UV mechanism. Think about Eureka Forbes AquaGuard RO and you will be transported to the terrain of AquaGuard RO Total ENHANCE, AquaGuard RO Total Reviva, and AquaGuard RO Total Atom. Those who are looking towards buying a revolutionary ultra filtration system can opt for the AquaGuard Ultra.

RO systems available in the market for domestic use incorporate two types of RO membranes, viz. Thin Film Composite (TFC or TFM) membrane and the Cellulose Triacetate (CTA) membrane. In the AquaGuard RO, you will find the TFC type in its spiral form. So, what is the difference between the two types? Well, the differences are mainly on filtration ability and chlorine tolerance. While TFC rejects 98 percent of standard contaminants and is less susceptible to bacterial odor, CTA rejects 93 percent of the contaminants and is more susceptible to organic fouling. And then the latter is chlorine tolerant. As TFC is not chlorine tolerant, use of pre carbon filter cartridge is a must so that membrane is not affected and lasts long. This is the reason why all Eureka Forbes AquaGuard RO systems come with pre-carbon treatment facility.

AquaGuard water purifier price isn't high on the pockets. Everyone knows that Eureka Forbes AquaGuard is affordably priced. The difference you will notice in the AquaGuard water purifier price in the various models is in terms of mechanism, technology, and storage capacities. So, if you happen to buy the Total Sensa, you are actually buying the world's only purifier equipped with E-boiling +, UV+, RO+ UF+ and SMP+ technologies that can purify any kind of water. Obviously AquaGuard water purifier price of this model will be higher compared to the other models. It is priced at Rs. 18,990, which is again no big amount given the groundbreaking technologies incorporated. Well, buyers hardly consider AquaGuard water purifier price when buying any of the models because they know they are buying the best!
