Study Nutritional Medicine at Paramount College by [Paramountcollege](http://www.paramountcollege.edu.au)

Article published on March 1st 2012 | [Fitness](#)

John was suffering from tremendous tiredness that was taking a toll on his working efficiency. When walking, it was hardly 5-10 minutes before he was out of breath and barely able to lift heavy objects at all. He had recently been diagnosed with ME (Myalgic Encephalomyelitis). Moreover, John had been suffering from swollen glands and a flu-like aching all-over for the entire past year.

After consulting with a wide variety of medical professionals, the best remedy offered to him was a properly considered diet rich in vitamins, minerals and formulated nutrients. This dietary science is known as nutritional medicine. This approach to his health and well-being immediately provided John with relief for his swollen glands and flu symptoms improving his mobility and general zest for life. In this, natural therapies help us to effectively gain and maintain a healthy lifestyle; proper health management is the key requirement for a contented and fulfilling life.

Nutritional medicine (or, say, natural therapy) deals with our mental as well as physical disorders addressing several key aspects including environmental, social and emotional considerations. Such an approach have proven very effectively in lifestyle improvement. To determine issues responsible for the obstruction of natural healing processes of the human body and to undertake measures for removing those are the major functions of nutritional medicine. By utilizing natural therapies we can take care of our health by our own volition, achieving improved wellbeing and better resistance to heal infections and recover from illness.

Nutritional medicine, which has made substantial and noticeable contribution in making human lives healthier in past two decades, includes nutritional as well as naturopathic remedies. It aims at restoring health and vitality; inhibiting the development of disease.

By acting as a catalyst for the healing abilities of the human body through the proper intake of food and nutrients, appropriate supplementation with vitamins, proteins, minerals and herbal medicines is the key function of natural therapy treatments. Moreover, advising people to make the lifestyle changes required to gain healthiest lives also comes under natural therapy treatments. In all cases, this includes identifying root cause of any health issue or disease and ways to treat them.

A Bachelor of Health Science Nutritional Medicine course is the way to get into the profession of finding the cause and prevention of diseases, and eventually to contribute in making human lives healthy and productive. Sundry nutrition courses are also being offered generally around the world.
