The Emergence of Medical Tourism in India by [Nathan Jones](#)

Article published on December 13th 2011 | [Fitness](#)

With technology booming at a rapid pace the sector of healthcare has made significant changes in the world of medical tourism. India is ranked as one of the growing economies in the healthcare sector in the world. But what is it that India is growing in leaps and bounds when it comes to healthcare? The answer is that it has the state of the art hospitals, advanced technology, highly qualified and well trained doctors, staffs and cheap medicines. This whole segment is attracting the tourists worldwide and they are flocking from across the world.

Hip Replacement India and Hip Joint Replacement in India is a surgery that has become quite famous over the years and it is a practice where the hip joint is changed to a modular bearing that provides a painless articulation. You can get some indications where in you can check whether you are suffering from this kind of a disease or not.

You need to check whether you have Hip joint Arthritis that can be either degenerative or is it inflammatory pathology. There can be a Fracture Neck Femur that is upper end of the thigh bone, Malformed Hip Joint that can be a disease of the childhood and Loss of blood supply of a vascular. If you still haven't figured out what exactly is a Hip replacement india and Hip Joint Replacement in India then here is the definition it is basically a painful hip joint that has radiological evidence of the obliteration of the joint areas. The only exclusion in this procedure is Fracture Neck Femur where there is a partial change of the component that is being performed.

If you check out the statistics then you will notice that there are around 200,000 hip replacement surgeries that are being performed every year in the United States and over 90 % of them are quite successful with no Revision Hip Surgery India complications being reported. But complication after the surgery is always a possibility that is lurking behind your mind. The risks are more often reversible and the older the person is the chances of the risk is higher.

The whole process of Revision hip surgery India is a bone preserving the hip replacement where the preservation of the bone takes place and there is less stress levels that protect the shielding and thereby it makes it easier to revise the hip if required. The head size provides a very effective stable joint and it would recreate the entire sensation of a normal hip joint process. So if you really have a problem with your joints and hip then get it healed as soon as possible.
