Hot tub technology continues to heat up with innovations such as Jacuzzi's new CLEARARRAY™ water purification system. CLEARARRAY uses ultraviolet light to purify and sanitize hot tub water. As a result, you'll need fewer hot tub chemicals – and your skin will thank you for it.

## What is CLEARARRAY?

CLEARARRAY is water purification system that sanitizes water with UV-C technology, an ultraviolet light technology that has been safely used to disinfect water. Many industries use UV-C technology including water bottling companies, hospitals, water plants, the food and beverage industries, pharmaceutical companies, fish farms, aquariums, and the aquaculture industry.

UV-C light is a natural part of the sun's electromagnetic energy spectrum. It works by interacting with the DNA of viruses and bacteria, rendering them unable to reproduce. CLEARARRAY does not add by-products to the water and dramatically reduces the need for chemicals.

In fact, you'll use up to 52% fewer chemicals after installing CLEARARRAY in your hot tub. The cost savings in hot tub chemicals can offset the cost of CLEARARRAY. Perhaps even more important, with fewer harsh chemicals floating around in your hot tub water, your skin won't suffer as much from chemical residue and the water won't have that unpleasant chemical odour. Your hot tub cover may even last longer due to the lack of potentially damaging chemicals and ozone.

## How to Get CLEARARRAY

If you have an existing hot tub, your local Jacuzzi hot tub service can convert your system to CLEARARRAY. Though offered by Jacuzzi, this amazing hot tub water purification technology can be installed on virtually any hot tub model in existence including off-brand and cheap hot tubs. CLEARARRAY hot tub parts connect into the body of the hot tub. Water flows through the heater and into CLEARARRAY's stainless steel tank where it is exposed to the UV-C light. This light instantly treats the water and eliminates 99.9% of the pathogens in the water.

If you don't already own a hot tub but are in the market for one, CLEARARRAY is available, factory-installed on many new Jacuzzi spas.

## Caring for Your CLEARARRAY Hot Tub

Once installed, you'll need to test your hot tub water each week using test strips just as you did before. You'll be given instructions for sanitizing your tub based on test results. Because CLEARARRAY uses light, you will need to periodically replace the bulb. Replacement bulbs and hot tub parts are available from your local Jacuzzi hot tub service.
