Topsoil in USA by [John Marsh](#)

Article published on December 25th 2011 | [Gardening](#)

Gardens really increase the beauty of your house. If you have a garden of your own you should have proper knowledge of soil so you can beautify it with your own choice of plants that will freshen your mood when you wake in the morning. Your garden is also useful for your children as you can play many outdoor games with them. It's really awesome to enjoy your weekend with your children. You can also use your garden for a morning walk, gym or you can enjoy your morning tea there.

If you are planning for a garden for your home it is very important that which quality of soil you are using. There are many suppliers of topsoil in USA for gardens but while searching suppliers should be careful. You can find them with the help of internet or you speak to them directly because you make that they are of reputable nature and the soil they are offering to you is of best quality. Important point is that that you are dealing with a reliable online supplier of soil and they can deliver straight to your door. Once you get soil which is rich in nutrients so as to promote a healthy garden. If you get topsoil you can also plant your own vegetables. It is easier than you think.

It is good to buy topsoil for your garden and price of topsoil will not exceed \$28 to 30 a cubic yard and price of soil also depends on the location at some places you can get topsoil between \$20 to 22 a cubic yard and topsoil is really worth because you can start planting away. 6.0 to 7.0 pH is good for growth of all plants and abundant sunlight is important for the growth of plants and topsoil has lots of organic matter. It is good if you can buy a pH level test kit and make sure that you can take a sample of soil from different locations of your garden.

There are three main components of soil. Growth of plants depends upon these which are as follows:-

Right soil composition: - Soil is a mixture of clay, silt, and sand. Best composition of these three is 38% of clay, 21% of silt, and 41% of sand. If the quantity of clay is high then it is called heavy soil and the problem of this soil is that in dry weather it tends to crack.

Right soil pH: - 6.0 to 7.0 pH is good for growth for all types of plants. Soil less than 7pH is acidic and more than 7pH is alkaline.

Right water content: - Plants and vegetables need at least one inch of water and the best way to use a drip water system.
