Great savings in the cartridge family by [Anne Mary](#)

Article published on February 15th 2012 | [Hardware](#)

In today's financial climate, a high proportion of the population, probably only barring those very fortunate few who are oblivious to the constraints most of us are operating under, are having to tighten our belts and try to save our cash in any way we can. Add to that the pressure being exerted to save the planet, and do everything we can to clean up the environment, then it all amounts to a bit of a headache for everyone. However, there are several ways to save money on the everyday items which we use on a regular basis, that very probably never really crossed our minds before, until having it pointed out to us by advertising campaigns.

Take for example the remanufactured inkjet cartridges, they are possibly one of the last things that would spring to mind when thinking about how to best cut costs, but in reality there are some fabulous savings to be made, and moreover, by undertaking such action, you will also be doing your bit to help on the green front. A high proportion of households all around the globe, now possess a home computer system and a vital part of that system is the printer, and most of those printers will be inkjet versions. Now it obviously depends on usage, but the cartridges can empty a fair rate of knots and more often than not, it happens right in the middle of printing an important document.

Naturally the recommendation from the major computer suppliers is to buy the replacement cartridges from a recognized name within the industry and that is good advice to a point, but what they often omit to inform you of, is that these big names also offer a huge selection of remanufactured inkjet cartridges, at as much as 30% cheaper prices, and the quality is every bit as good, and sometimes amazingly, it can be even better than that of the original, as very often the printer will only be partially filled when bought as new.

Most of the cartridges will come with a 30 day money back guarantee anyway, but that is rarely an issue, as the customer will usually find that they receive a product completely to their satisfaction. New technology in testing has seen such advancements to the devices, that it is virtually impossible to tell the difference. Additionally, there is no worries over invalidating the warranty, as the remanufactured inkjet cartridges are created in accordance with the Original Equipment Manufacturer (OEM), allowing peace of mind to the consumer. In recycling the consumables, it lowers the numbers of waste materials going into landfills, and consequently aids the affects on local surroundings.

Stringent quality control measures and a thorough inspection procedure is undertaken on the actual containers, to ensure the standard reaches the high requirements set, meaning the prospect of leakages is virtually nil. They are cleaned, individually prepared to accept the ink, which is filled digitally to a maximum level, and securely sealed. In all but name they are as good as new, therefore they represent outstanding value for money.
