How to care of Apple notebook battery by [John Smith](#)

Article published on March 30th 2012 | [Hardware](#)

You can maximize the use of Apple notebook battery life time (that is to be charged before use of time), and battery life by using simple techniques. One of the most important points is that in the appropriate temperature range to use your Apple notebook computer. Do not be locked in the summer heat on the closed areas.

Your new laptop when you first bought the laptop using the new computer, remember to full power, and then run Software Update to make sure your computer is equipped with the latest software. Apple will release software updates on a regular basis to improve battery performance. Standard maintenance for the lithium Apple M8403 Battery to maintain it is very important is to make the battery inside the electronic keeps flowing state. Apple recommends that you do not have use of a laptop power supply. Ideally, the use of method is going to use your Apple notebook computer batteries, back to the office using the power supply for charging. This can keep the flow of the liquid state of the battery. On the other hand, if you use the desktop computers in the company, but only when they go out occasionally using a laptop computer, Apple recommends you have at least a month to charge the battery discharge time. Do need to be reminded? On your desktop iCal calendar you can add an event reminder. Long-term storage If your laptop will be left idle for more than six months, Apple recommends you remove the battery, and maintained at 50% of the power state. If the store when the power is zero, the battery will be caused due to excessive discharge can not afford any charge. On the contrary, if the Apple M7318 Battery is fully charged, will be some loss of battery capacity, that is, to shorten the battery life. Please remove the 6800 mAh apple PowerBook G3 Battery after the storage in the appropriate temperatures. (See "Notebook PC temperature") Your new laptop when you first bought the laptop using the new computer, remember to full power, and then run Software Update to make sure your computer is equipped with the latest software. Apple will release software updates on a regular basis to improve battery performance.

Apple notebook battery Usage Tips:

1. Turn down the LCD brightness of your portable device.
2. Use built-in power management on your portable device.
3. Turn off LCD or other unnecessary accessories when not in use.
4. Set screen saver blank to 1 to 2 minutes of your notebook.
5. Add more RAM if you have extra RAM expansion slot, it will reduce the usage of hard drive and it is power exhaustive.
