Take the stress out of driving with a Reversing Camera by [James Blee](#)

Article published on July 23rd 2012 | [Hardware](#)

If there's one thing many drivers struggle with, it's reversing. Causing many bumps and dents over the years, reversing can be tricky and is an easy way to damage your car.

One easy way of helping with the problem is to invest in a reversing camera. A reversing camera can be a godsend if you are a driver who's under confident when reversing or if you're driving new car and are unsure of its dimensions. A reversing camera does exactly what it says on the tin. It is a camera that records and transmits images of the space you are reversing into so you can see exactly how much space you have. A reversing camera is fixed to the back of your car and the screen is mounted to your dashboard. Simply turn on the reversing camera on when you need to manoeuvre your car backwards and keep an eye on the screen to ensure bump-free reversing. A reversing camera can even be set up to turn on automatically whenever reversing occurs.

A reversing camera is also the gadget of choice for many lorry drivers and caravan owners. Providing invaluable help with larger vehicles which can be difficult to manoeuvre, a reversing camera helps to make easy work out of reversing no matter how large your vehicle is.

If you're interested in purchasing a reversing camera, you'll find that they boast a whole range of tech features. From the option to switch to mirror image mode to wide angle lenses which capture as much of your reversing space as possible; the possibilities with a reversing camera are endless. A reversing camera can either be wired or wireless depending upon your preference and different coloured cameras are often available at no extra charge.

For a range of competitively priced reversing camera, take a look at [in21now.co.uk](http://in21now.co.uk).
