Anti Roll Bars to Ensure Complete Suspension and Control by [Julia Roger](#)

Article published on December 14th 2011 | [Health](#)

One can only enjoy a smooth and safe driving when there is adequate protection and Anti Roll Bar brings this aspect by providing complete suspension.. Anti Roll bars were first used in race cars to protect the drivers and their aides in case of a roll over accident. Now the same mechanism is used by the modern cars and they are in built in the body. When there is an accident, they lock in place and prevent the riders from getting tossed around inside.

An anti-roll bar is an in built protection device in side a car. Specially installed in race cars, where the chances of accidents are much, much higher than ordinary circumstances, a roll cage prevents the passengers from tumbling along in case of a roll over. A roll over is worst of all kinds of accidents as chances of head injury is very high. Although each might be having their own rules, a roll cage, as it is also known, in some capacity is an absolute must.

One can even opt for refurbishment of car and install it later but that would be quite expensive. On the other hand, for other regular use, a single bar or an anti-roll bar is installed which runs through the head rest of the car and supporting the back and shoulders. An anti roll bar holds the passengers firmly in place and prevents the impact of the car of the body from reaching the passengers. Roll cages are made according to specifications and every racing organization insists upon them.

So buying cars which has anti roll bars fitted is of course and added advantage. And you would be safeguarded well against major accidents.
