Informative Facts about Knee Replacement by [Robert Brown](#)

Article published on December 27th 2011 | [Health](#)

Knee Replacement is a very common surgery going on these days. There are many people who suffer from knee arthritis and as a result they have problems in physical movement. Therefore, the best treatment for them is knee replacement surgery. However, it is very important to determine when is the appropriate time for the surgery and it is also necessary to know whether this surgery will be successful in eliminating the pain or not. If you have any such questions then go through this article to know everything about Knee Replacement.

Before knowing about it is important to know the reason which leads to this surgery, i.e. knee arthritis. Knee arthritis is the main reason why people have to go for the Knee Replacement. Knee Arthritis means inflammation in the knee joint. Due to arthritis the cartilage in the joint get worn out and this results in inflammation and if it is not treated at a proper time then it may lead to loss of cartilage and exposed bone. Mostly people suffer from knee arthritis known as osteoarthritis; however, there are other types of arthritis as well such as rheumatoid arthritis, lupus arthritis and gouty arthritis.

The next thing that needs to be considered is what is the appropriate time when this surgery should be performed? Knee Replacement surgery is performed usually when no other treatment influences the painful symptoms of the knee joint. In this surgery the damaged joint area is removed and replaced with a metal and plastic implant. But one must remember that this implant will also wear out as the time passes by and this is the reason why this surgery is usually done on older patients than younger ones because there is a risk of implant getting worn out quickly.

There have been developments and advancements in the field of Knee Replacement so as to provide best functioning of the implant for a longer period of time and more researches are going on to find out perfect knee replacement implants. The several types of Knee Replacement are as follows: partial knee replacements, rotating knee replacements, custom knee replacements and gender specific knee replacements.

Knee Replacement is a major surgery and deciding whether to go for it or not is a very big decision. Therefore, it is advisable to consult a very good orthopedic surgeon. He or she will be able to guide you better regarding whether you need knee replacement surgery depending on the condition of your knee.
