LifeChoice Portable Oxygen and Eclipse Portable Oxygen by [Andersonmarker](#)

Article published on April 7th 2012 | [Health](#)

The fact that life is too precious cannot be denied and medical science has well adapted to the increasing need of medical support and sustenance these days. One out of many such life-saving devices and provisions, are portable oxygen concentrators. They are portable devices used to provide oxygen supply to a patient at concentrations heavier than the regular levels of ambient air. The portable oxygen concentrator by the name itself is convenient and mobile, and can easily be carried around by patients who need a constant supply of oxygen.

LifeChoice Portable Oxygen is an oxygen concentrator that is less than five pounds of weight, which is a major improvement over earlier concentrators and similar devices, which were too bulky to carry around. As notable a product as it is, it can be used throughout the day, all over the year and is maintenance-free. More interestingly, there is no product in the market that is lighter than this LifeChoice product, and that can be used on a continuous basis. Additionally, it provides the latest Sleep Mode technology, which is of immense benefit to patients who require oxygen supply even for nocturnal use. This concentrator is also FAA approved, and in addition to that, it is also allowed on all possible modes of public transport including planes, buses and trains. This is indeed a boon for those patients who couldn't travel due to such medical requirements.

Eclipse Portable oxygen is another such portable device that aids patients with their intake of oxygen supply. It is small, lightweight and has an easy mechanism of working. It uses the autoSAT Technology and possesses the latest clinical features. The Eclipse Portable oxygen concentrator has apparently been introduced in 3 versions, each version getting better of the previous one. The developers claim to keep upgrading the product, which is obviously a positive happening. Also known as the SeQual Eclipse, it offers both continuous flow and pulse flow oxygen delivery and can be used again, on a continuous basis. Also being FAA approved and sailing on the same level as the LifeChoice Portable Oxygen concentrator, both provide immense medical aid to all those who are in dire need of this miracle device. Choice between the two seems to be a tough decision, for obvious reasons, considering the fact that both reach the same levels of quality medical assistance and service. But without a good amount of choices and dilemmas, wouldn't life be very uninteresting?
