Nerve plays a role of networking in our body system. Our body consists of bones, organs and various networking of nerves. Nerves play a very important part in our body because it's the one who maintain coordination between our brain and our rest of the body. We have nervous system which is an organ system contain a network of specialized cells called neurons that coordinate our action and transmit signals between different parts of our body.

Our nervous system consists of cells, neurons and glial cells. In the basic functions of nervous system neurons and synapses, neural circuit and systems, reflexes and other simultaneous response circuit comes in. we take good care of our health, be it our bones, muscles or overall health. But neither have we taken care of our nervous system nor is it easy to keep a check on our nervous system.

There is only one person who can take proper care of our nervous system, the person who knows about our nervous system more than we know. And that person is a neurologist who is specialized professional medical practitioner with the study of neurology. In place like Delhi where taking a proper health care is a tough job and most of the people don't care about it, it becomes a tough job to take care of nervous system.

And for this help assistance it is good to consult a neurologist. But it is tedious work to find out a doctor in such a place leave alone specifically neurologist that to if you start your search in the eleventh hour. But actually there are numbers of neurologist in Delhi region itself such as neurologists in rohini, neurologists in malviya nagar and neurologist in Green Park. These neurologists do help people with medicinal and proper treatment that have problem in nerves or say in nervous system.

Neurology is a medical specialty dealing with disorders of the nervous system of human body. A neurologist diagnoses and provides treatment of all categories of disease involving the central, peripheral, and automatic nervous systems; including their coverings, blood vessels, and all effector tissue such as muscle. The corresponding surgical specialty is neurosurgery. Neurologists may also be involved in clinical research, clinical trials, as well as basic research and translational research on human brain and nervous system.
