New Breed of Hearing Aids: Allowing the Hearing-impaired to Utilize Modern Devices
by [Rebecca Kavel](#)

Article published on May 14th 2012 | [Health](#)

People of all ages can experience hearing degradation. With younger people constantly paying attention to loud music, it is not surprising to know that they can also suffer from hearing impairment just like the aged. There are also people suffering from hearing impairment due to a childhood disease, or due to the fact that their mothers became sick during pregnancy. In any case, there are hearing aids that can assist these people correspond better and take pleasure in music and movies just like everyone else.

Hearing aids amplify noises and channel them safely into the ears. Nevertheless, these cannot cure hearing impairment. Hearing aids can be readjusted based on the user's sound preference. There are a lot of kinds that can match a person's condition, but it is better if items are ordered based on the suggestions of a physician.

Behind-the-ear or BTE aids are the most typical and most identifiable type of hearing aid. These have an earmold that the user dons over the ear. BTE aids may have a large or small noticeable receiver that can be fitted within the ear canal. Users who do not wish to don noticeable hearing aids like this "receiver in the canal" (RIC) aid.

There are also in-the-ear (ITE) aids that can be noticed by someone chatting face-to-face with the individual. These are constructed from silicone and are comfortable to use in the concha, the "ear bowl," just outside the canal. There are also alternatives called completely-in-canal, or CIC aids, that are barely noticeable from outside. CIC aids are good for diminishing feedback and static.

Creators of hearing aids know that while hearing aids can enhance communication, there is hardly any help for users in speaking to people via the telephone or listening to the television or radio. This is the reason why Bluetooth tools have been developed to connect calls with the hearing aid. When searching for a wireless hearing aid for sale, it is useful to search for Bluetooth gadgets, too. Several telephone companies have even made devices compatible for hearing aids.

For example, a number of wired hearing aids for sale are compatible with Telecoil or T-coil devices. These can be directly connected with hearing aid compatible telephones and mobile phones to let the user hear more clearly.

The same can be done with television sets. Stores of hearing aids online also offer "television ears" that can be connected to the television, which then transfers noises to the hearing aid through a telecoil tool. These can also be utilized with the radio. For more details, see TIAOnline.org/policy/accessibility/tia-and-hearing-aid-compatibility.
