It is universally known that water is the source of all life on earth. There is hardly anything beautiful than a glass of pure water. But to get some control over it, worldwide various governments and administrators are fighting wars over it to get hold of the source of some clear water. However, it will be really difficult to get almost cent-per-cent clear water. The whole issue is mired in political controversy in some way or the other. With the increasing population and this is making large areas getting polluted. Water gets affected more quickly and it gets contaminated all of a sudden.

A glass of pure drinking water could bring back that million dollar smile to many of the inhabitants in some of the worldâ€™s most under-developed region. Some of these prominent regions are situated in

Sub-Saharan Africa

South Asia

These are some of the most prominent regions, which are always mired in some type of regional conflicts. They are generally related to both politics and economics. Along with a large number of populations almost drowned in neck deep poverty had hardly any source of pure water to support their livelihood. You will be damn sure in agreeing with me that, âœwater is the most precious commodity of allâ•.

When some disaster affects us, it totally destroys our whole existence. This also affects some of the best sources of our food and water. It could be due to a massive earthquake or flood or a never forgettable tsunami. This totally affects the life of every individual, since they could hardly make out of what to do? To save those precious lives, there is need of water for disaster relief. It will not only protect them from getting into any type of water borne diseases, cholera or dysentery.

There are some specific tests that should be followed to make pure water accessible. Like the use of Water purifying tablets

High power water filters

Iron and arsenic resistant tube wells

This will help in getting or preserving pure water from getting further contaminated. In this case the water conservation techniques could come as a great source of help, like the preserving of the rain water. This modern form of preservation is generally known as the harvesting of rain water. This pure form of water could be used as water for disaster relief. There are specially trained officials who would handle this problem along with some added precautions so that the commoner could remain unaffected in more ways than one.
