Rhinoplasty, Nose Job Surgery NY - Surgery for a Better Nose! by [Donald T. Levine](#)

Article published on January 24th 2012 | [Health](#)

Rhinoplasty, Nose Job Surgery NY is a effective nose surgery which is done to balance the facial features for a improved beautiful look. This is mostly taken up by the people having crooked noses. Crooked nose gives a bad impression about one self and such people sometimes may become victim of society. So in order to avoid all these and free themselves from the social stigma, one wants to take up the nose surgery which has indeed prove to be of great help particularly to such people. However, some wants to take up this surgery just for the purpose of fashion.

So, before taking up this surgery one should take into account the following things:

i,§ The minimum age for going to this surgery is 16 years required that he/she is having the crooked nose and facing the breathing problem.

ii,§ Height and skin type is also should be taken into account.

iii,§ One may need to take up the additional surgeries to make sure that your nose balances your face features.

It is critical to note that one should consult an experienced nose surgery expert in order to avoid the complications later. There are chances that one may end up in having in either a thick or thin nose, if the surgery fails. So consider only a popular consultant having many years of experience.

In this surgery initially the doctor may click your nose snaps and explain all the details concerning the surgery like how to cartilage is reshaped, how the airways are will be left free and may show the samples of the nose after the surgery is done.

So, your consultant will explain you all the details about anesthesia that is given during the surgery.

Anesthesia is a condition where the sensation is blocked in a surgical patient in order to avoid the pain causing during the surgery. The doctor may need to explain about anesthesia to the patient before the surgery as some are allergic to this and to avoid the problem during the surgery.

Rhinoplasty, Nose Job Surgery NY is the surgery which helps in reshaping the nose irrespective of the type of nose one is having. The cartilage of the nose is cut along with the bone and the incisions are made inside the nostrils. This may lead avoid the visible scars outside the skin of the nose.

The process of surgery involves removing or adding of the nose cartilage or bone in order to reshape according to your face features. Once the underlying structure nose is achieved the incisions are closed.

Sometimes in this Rhinoplasty surgery piece of cartilage from the ear and also from the rib side are used

Once the surgery (nose surgery) is completed the tissues are replaced over the cartilage.

It is also important one to know that this surgery takes a lot of time to heal and see the gradual changes in the appearance of the nose. (There will then no nose problem if necessary precautions are taken after nose surgery or nose shaping).

You should also visit your doctor frequently to keep in check the improvement in the treatment as this relates to the breathing and airflow.

And once you have spent the time taking extra care of your nose, then everything would just be in order again. Pay heed to instructions given by the doctors for smooth recovering from the surgery. You may have a beautiful nose that compliments your face a lot compare to before.
