The Simple Reason Behind the Fame of Huge Buttocks by [Terry Bayer](#)

Article published on May 1st 2012 | [Health](#)

Enabling you to take a seat, making you look captivating (femme-wise), and breaking your fall if another person pulls your chair away just when you are going to sit down are what they do. These are the gluteus brothers: the oldest sibling maximus, the middle brother medius, and the youngest brother minimus - recognized as the "butt." Just like the entire body, it's also a spot plastic surgery treatment touches.

The Brazilian butt lift is carried out to make the butt seem bigger to realize a plumper and sexier body shape by sucking fat from other sections of the body, typically working in tandem with liposuction, and injecting it right into the butt. Although both males and females can opt for a Brazilian butt lift, nearly all who undertake this process - nine out of 10 - says the American Society of Plastic Surgeons (ASPS), are women. Just what are their motives for obtaining a butt lift?

The "bomb": Men like females with well-rounded figures and full-size butts, period. This can be a rather recognizable setting in popular culture (movies, fiction, general fiction): women who possess huge buttocks and breasts usually catch males' attention. Andrew Clark of Bristol University claimed that large butts have been preferred over the course of history, even during the Renaissance age.

However, Clark also points out that for any butt to be deemed attractive it must not only be huge, it must be well-shaped also. In his piece printed on The Sun in 2009, he used singer and actress Jennifer Lopez as an example. His study of the actress's photographs her getaway in Italy stresses the idea that shape is a crucial factor, whether for small or big buttocks.

The fad: In many areas of the globe, including the U.S., big butts are a popular sight. Clark says large butts are a general trend in the U.K., Europe, and the Americas; although not usually in East Asia where their buttocks are smaller. Take it from stars like Kelly Brook and Beyonce to prove that there is certainly nothing to be embarrassed about in having a big butt. As a matter of fact, along with Botox, Brazilian butt lift has witnessed its share of fame.

The butt lift is taking almost every state in the U.S. by storm, similar to the Botox Los Angeles has to offer. Statistics from the ASPS revealed that patients shelled out around \$13 million in butt lifts in 2009 alone. Given that large butts trending as of today, butt lift patients may rise in the coming years.
