One must however remember that even while getting a natural tan lying in the sun, they must make use of sunscreen without which otherwise would merely leave you with the tan colour which everyone tries to avoid: yes, the orange weird tan. Sunscreen Chap Stick is also important and one should not do without it when it comes to tanning naturally in the sun.

To avoid the harmful effects of the UV rays emitted by the sun, many people go for sunless tanning, and are also called as self tanners, as they get the skin darkened as the sun would have, in their own ways. Creams, gels, lotions and sprays are readily available for self tanning. Tanning beds and sunlamps are also used for the same purpose of artificially tanning oneself.
