Tobacco cigarettes include a lot of unsafe chemical compounds and dangerously poisonous materials, really a few of which are not even known by the smokers themselves. The heart rendering reality proved correct by Cancer Research institute Uk that in totality there are 4000 poisonous elements in a tobacco cigarette. That is the reason e-cigarettes are gaining popularity because they are smoke-free, hassle-free, and trouble-free. Tobacco cigarettes are truly hazardous snakes with several toxin stricken fangs; few chemical substances are used as added flavors that assists free nicotine from tobacco turning into gas. These chemicals will absorb more nicotine and will keep a smoker hooked.

Benzene, Acetone, Formaldehyde and tar are a few serious chemical compounds in the never ending list of polycyclic and aromatic hydrocarbons. Benzene is found in pesticides and petrol additive, this colorless cyclic hydrocarbon which is obtained from coal and petroleum. Benzene in tobacco cigarette is very carcinogenic and is first most important chemical substance that leads to leukaemia. Another dangerous chemical substance that an e-cigarette helps you avoid is Acetone. Acetone greatest known as nail polish remover is a highly fragrant volatile liquid that is released in cigarette smoking. Another highly poisonous colourless liquid that is used to preserve dead-bodies Formaldehyde is released in great volumes in a tobacco cigarette. Electronic cigarettes protect you from a painful sordid end.

Chemicals causes ailments that are severe in nature. The release of this toxin leads to hazardous diseases such as cancer, respiratory and gastrointestinal problems. Particulate matter is taken in into your lungs when you smoke in on a lighted cigarette. 70% of this smoke condenses in your lung area as soon as the light is puffed and tar residue from the smoke is deposited in the smokerâ€™s lungs; the tar causes further damage to oneâ€™s body deteriorating health and happiness of an individual. Electronic cigarettes protect people from such banal outcome of smoking. E-cigarettes are refillable & re-chargeable so they are cost-effective and can save you fortune in a long run.

What is more, there is no fire, no tobacco, no nasty carcinogens so that you might smoke cigarettes without harming others close to you. Therefore e-cigarettes can be smoked without harming others around you and at places where smoking is banned. Another tasteless, harmful as well as dangerous gas that is released when a tobacco cigarette is burned is carbon mono-oxide. Released in large quantity, the gas has fatal repercussion on a human body. Lead, a dense metal extract that is sued in paints because it is very poisonous is also released along with the tobacco fume. These chemical descendants are also highly dangerous in nature; they relay oneâ€™s growth, causing vomit, nausea and brain damage. The list of the dreadful aftermath of tobacco cigarettes is endless. E-cigs guard you from all such misery at the same time allowing you to smoke legally in cinemas, restaurants & airports. Producers state these donâ€™t contain any of the 4,000 cancer-causing substances like tar and carbon monoxide found in regular fags and are, as a result, a healthier smoking option that could help users kick the butt ultimately.
