Pest control is essential to protect the place from White Ants by [Adamina Ada](#)

Article published on January 7th 2012 | [Home Business](#)

A lot of termite control products are toxic to termites, but very few of the termites are actually killed before being repelled by the Termiticide. As a result, termites remain alive and actively seek gaps in order to gain access to the building. They do it day after day, year after year to find a way through. Termidor is not a repellent to termites. The product cannot detect and avoid the treated area. As a result, termites continue to forage randomly through the soil until they meet Termidor and take a lethal dose. Termidor only moves a small distance outward from the application site prior and bond tightly to organic matter in soil. This means that the concentration of Termidor decreases with increasing distance from the site. Termites first come in contact with Termidor on the edge of the treated area as a tunnel through the soil to the house. At this point, the product is at its lowest concentration.

Application of pest control keeps away the pests.

The application of Pest control in your place varies from do-it-yourself implementation and very accurate scientific chemicals and insect predators of highly qualified professionals. Despite the fact, the pest control in industry in the world is still very nominal in household or business. Those who need to control pests range from families to large-scale agro-conglomerates that need to maximize their safety. Among these are restaurants, bars, facilities for food production, farmers and anyone who deals regularly with food. Pest control can make us more comfortable and it can also save lives.

Controlling White Ants is cumbersome.

There are many things said to repel White Ants if put in their path. Black pepper, bay leaves, cayenne pepper, catnip, chili powder, cinnamon, cloves, cream of tartar, peppermint, gypsum powder, salt and talcum powder are just a few told to disperse or drive away the White Ants. White Ants do not like these things through. Cucumber peels can also send them away for a while. Comet or Ajax cleanser is also said to work, but you should be very careful about your pets or children. Borax powder is a natural insecticide, but must be kept away from pets and children. There are a number of spray liquid that can be made to spray ants. One teaspoon of liquid soap mixed with a liter of water is said to make an effective spray. You can just fill a spray bottle with a good white vinegar and spray it to ants. Another recipe calls for 1 clove of garlic, 1 small onion, 1 tablespoon of cayenne pepper and soak it in a quart of warm water for about an hour. Then strain and put in a spray bottle and spray it in the place where you find White Ants.
