Caps and Plugs – All Purpose Products [Quinn White](#)

Article published on May 17th 2012 | [Home Improvement](#)

If there are products that are always in demand, all through the year and all around the world, they have to be caps and plugs. These are universal products with an amazingly wide range of applications, which means that there would be industries that may not be able to come out with their finished products unless they had caps and plugs to complete their work in process. Every container and every thread needs sealing as well as protection, and every fluid has to be kept in its place, safe and secure inside the bottles or other forms of containers that they are transported in, from the manufacturing plant through the supply chain to the ultimate selling point before it reaches the customer.

Caps and plugs are involved in this highly important activity of protecting edges and threads from losing their mettle or damaging other surfaces, while also preventing vital ingredients and materials from leaking out of their containers. Further, caps and plugs also play a key role in protecting people and property around, especially when the containers in question tend to be carrying chemicals or other sensitive matter.

There are various types of caps and plugs, manufactured with different purposes in mind. Caps and plugs could be of the push-fit kind, where you may simply have to push them on to the desired slots to make them cling on to them to perfection, serving the purpose by protecting or preventing. In other cases, you could have caps and plugs that are tapered, where the inner surface at the depth tends to be tapering while the outer wall tends to broaden towards the edges. These are perfect options where there may be different diameters of the tubes or cylinders in question and the caps and plugs could be pushed in to varying depths to account for complete closure.

There are other kinds of caps and plugs, as in the case of tear tab caps and tear tab plugs, where they are deliberately designed with tear tabs in place to ensure that they are not tough to remove, while they remain compact and intact when put in place. There are other kinds of caps and plugs, as in the case of round end caps and hexagonal caps, which would come in handy depending on the purpose with which you put them to good use. There are threaded caps and plugs as well, available for specific functions and purposes. With such variety, you should consider your industrial problem solved.
