Cool and Enhanced Lifters for Hot Tub and Spa Covers by [Nicolas Ben](#)

Article published on December 19th 2011 | [Home Improvement](#)

You might have often faced this difficulty to lift the hot tub covers or the hot tub bath covers and when you lift the cover half your energy is drowned in just lifting it. So here some new device has been invented which helps you in lifting the covers with equal ease and comfort and that device is lifters. These lifters are specially designed for the hot tub covers and they consist of a large U-shaped metal bars that will go right across the center of the spa cover. It comes in a folded format over the bar that enables the bar to push it open the spa cover or the hot tub cover. These covers work in a very good manner as long as the cover is not so heavy.

So we should always try to get those hottub covers that are not so heavy that we ourselves won't be able to pick it up or even without any device it cannot be picked up. The lifter will work the most on covers that have not yet began to saturate and there are many owners of the spa and hot tubs that would help in buying the cover of hot tub as the hot tub cover began to saturate. But even if you get these lifters installed still they won't be able to lift the cover completely they would only be able to lift the cover halfway and the rest you will have to lift on your own. If this process you won't be able to complete then the bar lifter would not be of much help for you.

The bar lifter will also not offer you the option of hanging your spa cover as it cannot handle the pressure of heavy covers so it is best to install a cover that is light weight and is easy to open as that would prove best for your spa or hottub. If you already have a spa cover that is heavy and difficult to open then you need to change the covers and install one that would be easier for you to handle and operate. It should be such that you would not have to take the help of anything to operate it.

As obviously this would be the last thing that you would want in your house a highly priced spa and even that turning out to be a struggle to get into. If you are planning to throw away your spa cover that is heavy and to get a spa cover that is light weight then you should change you mind as you should store the spa cover in a cool dry place and store it for a year so that the saturation weight is reduced and then it would become lighter and you would be able to use it again. The hot tub covers for your hottub or your hot tubs should be such that is user friendly and lightweight so that you can lift it with great ease and just jump into the hot tub for a soothing splash.
