Decorative Lighting That is As Pretty As Your Pictures by [Crescentharbor](#)

Article published on November 25th 2011 | [Home Improvement](#)

Whether you have a multi million dollar mansion or a budget crash pad, something that you are more than likely to have on display in your home is art. The pieces of art that adorn your walls might be Old Masters or they might be cheap and cheerful modern prints from a discount store. In addition to artwork, you might also have photographs of your loved ones on show, or certificates you have been awarded for a variety of achievements. Whatever you decide that your walls should wear can be decoratively ramped up with picture lights.

Picture lights add lovely home décor touches that are available to most pockets. They are not designed to be used in place of your main light fixtures, as they do not give off enough light to do so. However, they sumptuously supplement your home lighting systems, and can be used without your main lights to create a cozier, dimmer, subtler ambience. When used alone, picture lights create the perfect atmosphere in which to relax and unwind, not mention when romance might be on the cards.

Of course, picture lights were originally invented to do exactly what they say on the tin. The illumination of your pictures is their primary purpose, making them cost effective and multitasking little hard workers when you consider the contribution they make to the ambience of your rooms. If budget is a big deal for you, picture lights may be preferable to wall sconces. Whilst they essentially serve many of the same purposes, picture lights are generally more compact than wall sconces, and their size differentials are naturally reflected in their price points.

Furthermore, picture lights can be portable rather than fixed. Various models are offered in battery operated, direct wired and plug in formats. When moving home, your light fixtures might be impossible to take along, yet portable picture lights can easily relocate alongside you.

They are used for public lighting, besides home lighting. Some of the more expensive and sophisticated picture lights are utilized at art galleries and museums, where the appropriate showing off of artwork and highlighting of accompanying information are of imperative importance. Portable picture lights are used by many artists who display their work in a variety of different environments, besides traditional galleries and museums where you might expect higher profile exhibitions to reside either permanently or temporarily.

Crescent Harbor Lighting spares more than a passing thought for picture lights. When seeking out simple yet effective decorative lighting solutions, it is highly recommended that you might do likewise.
